

Remarks

The instant Preliminary Amendment is proffered to provide an Abstract which it appears from the applicants' file was not included in the original filing and to include an additional inflammatory condition by name which was included in the original listings. The condition is "pulmonary fibrosis". This condition is defined in Stedman's Medical Dictionary, 26<sup>th</sup> Edition, Williams & Wilkins, as "an acute to chronic inflammatory process of the lungs . . . either completely ideopathic or associated with collagen-vascular disease."

The specification throughout states that "the pathological conditions contemplated herein . . . encompass the inflammatory and autoimmune diseases" (p. 1, ll. 17-18), "the use of diacerein and rhein in the treatment of inflammatory and autoimmune diseases" (p. 4, l. 7), " . . . method of treatment including the administering of diacerein or rhein to patients suffering from the inflammatory and immune diseases . . ." (p. 6, l. 15), Claim 2, etc. Attention is also called to p. 5, ll. 17-18, wherein it is noted that "IL-1 and TNF . . . contribute to the fibrosis and tissue degeneration of the chronic proliferative phase of inflammation", as well as to many other instances wherein an inflammatory condition is referenced broadly as amenable to treatment as described and claimed, including conditions associated with collagen-vascular disease.

09768816-041801

It is submitted that the amendment's inclusion of "pulmonary fibrosis" in the specification and claims does not constitute new matter.

Respectfully submitted,
